

Lesson 1 Guide · HTML Structure

Module SC102 · Web Development Fundamentals · Social Coding SA

Every web page is a tree

HTML describes a page with tags. Most come in pairs — an opening tag and a closing tag — and the content sits between them. Save this as index.html and open it in a browser:

```
<!DOCTYPE html>
<html>
  <head>
    <title>My First Page</title>
  </head>
  <body>
    <h1>Sawubona, world!</h1>
    <p>I am learning web development with Social Coding.</p>
  </body>
</html>
```

The tags you will use constantly

<h1>–<h6> headings, biggest to smallest · **<p>** paragraph · **** link · **** image · **/** bullet list · **<div>** a container for grouping.

```
<a href="https://socialcodingsa.org">Visit Social Coding</a>
<ul>
  <li>HTML - structure</li>
  <li>CSS - style</li>
  <li>JavaScript - behaviour</li>
</ul>
```

Practice

Build a page about yourself with: a main heading with your name, a paragraph about your school, a list of three goals, and a link to a site you like. Keep it valid: every tag you open, you close.
