

Lesson 2 Guide · Styling with CSS

Module SC102 · Web Development Fundamentals · Social Coding SA

CSS = rules that say how HTML looks

```
<style>
  body { font-family: Arial; background: #f6f5ec; }
  h1    { color: #55830b; }
  .card { border: 1px solid #ccc; padding: 12px;
          border-radius: 8px; }
</style>
```

A rule = selector { property: value; }. Select by tag (h1), by class (.card — reusable), or by id (#header — one per page).

The box model

Everything is a box: content, then **padding** (space inside the border), the **border**, then **margin** (space outside). When spacing looks wrong, inspect these three.

Practice

Take your Lesson 1 page and: give the body a background colour and readable font; make your h1 Social Coding green; wrap your list in a div with class "card" and style it with padding, border and rounded corners.
