

Assignment A1 · Python Basics

Module SC101 · covers Lesson 1 · Social Coding SA

What to do

Write ONE Python file called `about_me.py` that does all of the following:

1. Creates variables for your name (str), age (int), height in metres (float), and whether you enjoy coding (bool).
2. Prints one friendly sentence using your name and age with an f-string.
3. Asks the user for their year of birth with `input()`, converts it to int, calculates their age this year, and prints it.
4. Includes a comment above each section explaining what it does.

Marks (100)

Component	Marks
Variables of all four types, well named	30
f-string sentence prints correctly	20
input + conversion + calculation	30
Comments and tidy code	20

How to submit

Upload `about_me.py` in the LMS before the due date. One file only.

Dates: see the assignment in the LMS. Late submissions are flagged automatically.
