

Assignment A4 · JavaScript Mini-Project

Module SC102 · covers Lesson 3 · Social Coding SA

What to do

Build ONE interactive page: an airtime top-up calculator.

1. An input where the user types an amount in Rand, and a button labelled "Calculate".
2. When clicked, JavaScript reads the amount and shows: the amount plus 15% VAT, and how many R12 data bundles that buys (whole bundles only).
3. If the input is empty or not a number, show a friendly message instead of breaking.
4. Style it so it is usable on a phone screen.

Marks (100)

Component	Marks
Input + button wired to a function	25
VAT and bundle calculations correct	35
Handles bad input gracefully	20
Phone-friendly styling	20

How to submit

Upload your single HTML file (calculator.html) in the LMS before the due date.

Dates: see the assignment in the LMS. Keep it simple and working beats fancy and broken.
